1) What is (are) your main interest(s) in attending the workshop?
   discuss future of semantic technology in context of new, “social” applications. I believe MOS could be, or become such a domain and application.

2) What mapping of science or semantic web expertise do you have?
   SW: tools and methodologies based on linguistic and database design principles, for eliciting and storing semantics in the form of ontologies. Study semantics as agreements among stakeholders about a “real world” rather than as a syntactic reasoning resource.
   MOS: I know nothing much really, beyond having read some work by e.g. Katy Börner

3) What is the most insightful mapping of science or semantic web technique or knowledge you know?

4) What would you like to learn / achieve at the workshop?
   Validate my hypothesis under (1)
